Havrium
2024 - 2024

Designing UI/UX. Implementing UIs in React.

Software Developer

IT Solutions RDNK
2023 - 2024

Creating automation tools for e-commerce.

About me ▾

Short bio about me

Passionate Computer Science student with a strong interest in software development, devops and UI/UX design. Coding is fun! I spend many hours creating new open-source side projects and learning never-ending new technologies. Most of my projects are self-hosted on personal server running Ubuntu Server 24. In my free time I climb and do rugs 🧘.

Recent projects ▾

Strapup - a template CLI

React, TypeScript, Next.js, NodeJS, TailwindCSS, CLI

A project consisting of Strapup npm package - a CLI tool and a website for its documentation. It allows to quickly bootstrap any project by running custom scripts and pasting custom templates all from within interactive CLI.

Boss Monsters Tabletop

React, TypeScript, NodeJS, TailwindCSS, Socket.IO, Express

Recreation of Boss Monsters - a tabletop RPG, as a multiplayer game on the web. It's one of my older projects, which underwent few cycles of sudden gain and lost of interest in it. (thus TypeScript and Tailwind added half way through). I decided to include It here, as It shows my progress in terms of programming in general and the ability to use the knowledge acquired from other projects.
